## ACADEMIC PROJECTS

### ❖ Build Tour Management:

In my project, I used ReactJS for the frontend, Node.js for the backend, and MongoDB for database management. This setup enabled users to browse locations, search comments and ratings, authenticate users, and book destinations.

### ❖ Build Google Clone:

I used Rapid API to fetch dynamic data and display it in real-time on the website. The app also has search functionality and is built using React, Rapid API, and TailwindCSS.
